

A TEC handle with two  
handle plates attached  
to the flanges

TEC 300mm plate with  
two plate holders attached  
to the flanges.  
This sets the telescope on the saddle plate  
of the German equatorial mount

AN optional longer plate could be used insted of the TEC's  
300 - this might give larger range for balansing the telescope  
in the saddle plate.
